PIG CROP REPORT
U. S. DEPARTMENT OF AGRICULTURE

JUNE 1959

Release:
June 19, 1959
12:00 Noon (E. D. T.)

The 1959 spring pig crop totaled 58,494,000 head, an increase of 12 percent from the 1958 spring crop, and the largest spring pig crop since 1951, according to the Crop Reporting Board. The number of sows farrowed this spring totaled 8,266,000 head, which was 11 percent more than the 7,428,000 sows farrowed in the spring of 1958. The number of pigs saved per litter averaged 7.08, compared with 7.05 a year earlier and the record high of 7.12 pigs per litter in the spring of 1957. Breeding intentions reports indicate a total of 6,394,000 sows to farrow this fall. This would be an increase of 8 percent over the 5,912,000 sows that farrowed in the fall of 1958. If these farrowing intentions materialize and the number of pigs saved per litter equals the average, plus an allowance for upward trend, the 1959 fall crop would be 46 million head. The combined spring and fall pig crops for 1959 would be 104.5 million head, 10 percent above 1958 and 16 percent above the 1948-57 average.

The number of hogs 6 months old and over on farms and ranches June 1 was 11 percent more than a year earlier.

This report is based on a survey of 155,000 farms and ranch operators. These returns were obtained largely in cooperation with the Post Office Department through rural mail carriers.

UNITED STATES

SPRING PIG CROP UP 12 PERCENT

The number of pigs saved in the spring of 1959 (December 1958 through May 1959) is estimated at 58,494,000 head. This is 12 percent more than the 1958 spring crop of 52,336,000 head, 7 percent more than average and the largest spring crop since 1951.

The 1959 spring crop was larger than a year earlier in all regions. Increases were as follows: North Atlantic, 10 percent; East North Central, 9; West North Central, 10; South Atlantic, 19; South Central, 24; and West, 16 percent. All regions, except the North Atlantic, saved more pigs in the spring of 1959 than the respective 1948-57 average.

The number of sows farrowed in the spring of 1959 totaled 8,266,000 head, 11 percent more than last spring and 1 percent more than average. Spring farrowings were down less than 1 percent from breeding intentions as reported last December. Changes by regions were varied, with farrowings up from intentions in the North Atlantic and South Atlantic; down from intentions in the West North Central and the West and approximately the same in the East North Central and South Central. The percentages by regions that the 1959 spring sows farrowed were of 1958 compared with the intentions as reported last December are as follows: North Atlantic, 109 percent now and 105 percent last December; East North Central, 108 and 108; West North Central, 110 and 112; South Atlantic, 115 and 111, South Central, 121 and 121; and West, 116 and 121 percent.

The 7.08 pigs saved per litter this spring is the second highest on record, exceeded only by the 7.12 pigs saved in the spring of 1957. The 1958 average was 7.05 per litter. The West North Central is the only region to show a smaller number of pigs per litter than in the spring of 1958. Since 1950, the average litter size for the spring crop has increased each year except for 1958. The average for 1959 is 12 percent more than the 1950 average.

For the eleventh consecutive year there was a shift toward earlier spring farrowings. The December through February quarter accounted for 38.5 percent of the spring farrowings this year compared to 37.0 percent last year and the 1948-57 average of 24.3 percent. The 38.5 percent during these three months this year is double the percentage during these months 10 years ago. The percentage of sows farrowing each month during the spring season compared with the same month last year is as follows: December 1958, 6.8 percent compared with 5.7 in December 1957; January 1959, 12.5 percent compared with 10.9 percent in January 1958; February, 19.2 compared with 20.4; March, 25.5 and 25.6; April, 23.0 and 23.3; and May, 13.0 and 14.1 percent.

1959 FALL INTENTIONS UP 8 PERCENT

Reports on breeding intentions indicate that 6,394,000 sows will farrow during the fall season (June through November) of 1959. If these intentions

are realized, the number of sows farrowing this fall will be 8 percent more than during the fall of 1958, 21 percent more than the average, and the largest number since the fall of 1943. Compared with last year, all regions showed increases in the number of sows intended for fall farrowing. The largest percentage increase is reported in the South Central which is up 14 percent. The South Atlantic and the West each show a 10 percent increase. The West North Central is up 9 percent, the North Atlantic up 6 percent, and the East North Central up 4 percent.

These changes from last year are based on breeding intentions reported by farmers about June 1.

If fall farrowing intentions materialize and the number of pigs saved per litter equals the average, with an allowance for upward trend, the 1959 fall pig crop will be about 46,000,000 head. This would be the second largest fall crop of record, exceeded only by the 47,584,000 pigs in 1943. The combined pig crop of 1959 would be 104,494,000 head, 10 percent above last year, and 16 percent above average. A crop this size would be the third largest of record, exceeded only by 1942 and 1943.

HOGS OVER 6 MONTHS ON FARMS JUNE 1 UP 11 PERCENT

The number of hogs over 6 months old (including sows) on farms June 1 this year was 16,680,000 head, an increase of 11 percent from the 15,007,000 head on hand a year earlier. The 1958 fall pig crop, which makes up a substantial proportion of the June 1, 1959 inventory of hogs 6 months old and over, was 17 percent larger than the 1957 fall pig crop. The total commercial hog slaughter January through April 1959 was 14 percent above a year earlier.

INTENDED FARROWINGS UP 7 PERCENT IN SELECTED CORN BELT STATES

The intended number of sows for 1959 fall farrow for 9 of the Corn Belt States is 7 percent more than a year earlier. These States are Ohio, Indiana, Illinois, Wisconsin, Minnesota, Iowa, South Dakota, Nebraska, and Kansas. The 9 States accounted for 67 percent of the 1958 United States pig crop.

Present intentions indicate that increases will take place in both the summer (June through August) and the fall (September through November) quarters. The number of sows expected to farrow during June, July and August at 2,209,000 head, is 6 percent more than the 2,087,000 head farrowed during the same period last year. The 1,871,000 head intended for farrowing in September, October, and November of 1959 for these States is 8 percent or 137,000 head more than the 1,734,000 sows farrowing for these months in 1958.

In the 9 States the number of sows farrowed in the 1959 spring season totaled 5,499,000 head, 9 percent more than a year earlier. Sows farrowing

during December, January, and February totaled 1,920,000 head, 16 percent more than the 1,651,000 farrowed during this period a year earlier. The number farrowed during March, April, and May totaled 3,579,000 head, up 5 percent from the 3,393,000 head in 1958.

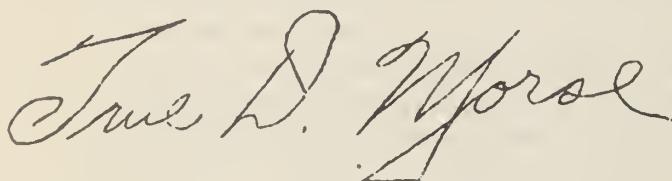

ALL HOGS UP 8 PERCENT IN SELECTED CORN BELT STATES

The number of all hogs and pigs on farms June 1 in the 9 States totaled 47,967,000 head. This is 8 percent more than the 44,221,000 head a year earlier. Each of the States show more hogs on farms June 1 than a year earlier except Wisconsin, which shows a 2 percent decline. Increases in other States are as follows: Ohio, Illinois, and Iowa each up 8 percent; Indiana and Minnesota each up 10 percent; South Dakota, 11 percent; Nebraska, 12 percent; and Kansas, 15 percent more than a year earlier.

Hogs and pigs six months old and over in the 9 States totaled 9,568,000 head, 9 percent more than a year earlier. The number under 6 months of age was 8 percent more than last June, with an increase of 15 percent in the 3-6 months age group, and an increase of 5 percent in the number under 3 months of age. The 25,505,000 pigs under 3 months old on farms June 1, 1959 accounted for 53 percent of all hogs, compared with 24,183,000 head--55 percent of the total hogs a year earlier. Hogs and pigs 3-6 months of age totaled 12,894,000 head, 27 percent of all hogs this year, compared with 11,224,000 head -- 25 percent of the total a year earlier.

The supplemental data for these 9 States is made possible by matching funds provided jointly by State agencies and the United States Department of Agriculture under provisions of the Agricultural Marketing Act of 1946.
